

**AMENDMENTS TO THE SPECIFICATION**

**Please amend the 3<sup>rd</sup> full paragraph on page 4 of the Application as follows:**

*A1* Conventionally, the Web server ~~handing~~ handling the request modifies the Web page 2 by replacing the scripts 4 of Figure 1 with the output of the script execution (e.g., the Write() arguments). Typically, the output includes one of more HTML elements 6, as illustrated in Figure 3. Thereafter, a “modifies” Web page 8 may be sent to the requesting Web browser.

**Please amend the 2<sup>nd</sup> full paragraph on page 7 of the Application as follows:**

*A2* In one aspect of the invention, a request reception module may receive a request for ~~an a~~ document stored within a document server. The document may be encoded in the hypertext markup language (HTML) and may include one or more HTML elements.
